

BEFORE THE NUMBERS

Branding & Website Redesign Brief

Working master brand: BEFORE THE NUMBERS

Working tagline: Don't wait for the diagnosis.

Flagship educational framework: THE HIDDEN METABOLIC CLOCK

Purpose of this brief

This document summarizes the branding direction and strategic conclusions reached for the redesign of the current diabetes/metabolic-health advocacy website. It is intended as a working brief for the branding and website team.

The objective is to evolve the project from a Philippines-focused diabetes-support identity into a broader, scalable health-awareness and metabolic-health education movement, while retaining the founder's original personal motivation and Filipino context.

Important: this is a branding and communications direction, not legal trademark clearance. Before substantial investment in the identity, the name should be searched through IPOPHL, WIPO and relevant target-market trademark databases.

1. Brand Direction

BEFORE THE NUMBERS

The working master brand is **Before the Numbers**. The name represents the period before conventional measurements, symptoms or a formal diagnosis force a person to confront a health problem.

The brand should not be positioned as "another diabetes website." Diabetes is an important entry point, but the larger mission is awareness of metabolic health, early signals, risk trajectory and informed action.

Core positioning: Help people understand what may be happening in their health early enough to make informed decisions—rather than waiting for a diagnosis to become the first serious wake-up call.

Primary tagline candidate:

"Don't wait for the diagnosis."

The tagline supplies the emotional and advocacy meaning that the name alone does not immediately communicate.

2. Brand Architecture

Layer	Working direction	Role
Master brand	BEFORE THE NUMBERS	Public-facing advocacy and education identity
Tagline	Don't wait for the diagnosis.	Makes the mission immediately understandable
Flagship framework	THE HIDDEN METABOLIC CLOCK	Core educational model/report explaining what may happen before conventional

Layer	Working direction	Role
Supporting concept	Metabolic health	Broader subject area; not the master brand
Initial entry point	Diabetes awareness	High-recognition doorway into the broader mission
Long-term territory	Preventive health education / early awareness	Allows expansion beyond diabetes and the Philippines

3. Why the Brand Should Not Be Diabetes-Limited

The project began from personal experiences involving diabetes. The strategic conclusion is that diabetes should remain a major content pillar, but not define the entire brand.

The broader thesis is that metabolic dysfunction can develop gradually and may precede a diabetes diagnosis. The existing Hidden Metabolic Clock report explains insulin resistance, compensation, metabolic warning signals and the transition toward prediabetes and Type 2 diabetes as a conceptual progression—not a fixed timetable.

■filecite■turn1file0■L12-L28■ ■filecite■turn1file0■L72-L95■

This creates room for future coverage of cardiometabolic health, blood pressure, liver health, body composition, nutrition, movement, sleep, family history and other related areas without requiring a complete rebrand.

4. The Core Advocacy Idea

The advocacy voice should be firm enough to wake people up, but not fear-based or sensational. The desired emotional movement is:

Warning → Awareness → Understanding → Action → Hope

The brand should challenge the habit of waiting for a diagnosis while offering a constructive alternative: measure what is relevant, understand the context, make sustainable changes, monitor progress, and adjust.

The existing framework explicitly uses: **MEASURE → UNDERSTAND → INTERVENE → MONITOR → ADJUST.**

■filecite■turn1file0■L188-L225■

5. Messaging Pillars

Pillar	Message direction
Before diagnosis	A diagnosis should not be the first time people become serious about their health.
Look beyond one number	A glucose number matters, but it is one component of a broader metabolic picture. ■filecite■turn1file0■L119-L124■
Recognize early signals	Potential warning features should be presented as clues worth discussing—not as self-diagnostic checklists. ■filecite■turn1file0■L125-L130■
Trajectory matters	The question is not only where a number is today, but whether relevant markers and risk factors are stable, improving or worsening. ■filecite■turn1file0■L131-L136■
Action without extremism	The goal is not to demonize carbohydrates, rice, insulin or individual foods. The focus is the overall metabolic context. ■filecite■turn1file0■L137-L142■
Hope and agency	Earlier understanding may create more opportunities to influence the trajectory; the message should empower rather than frighten. ■filecite■turn1file0■L143-L148■

6. Filipino Context Without Being Philippines-Limited

The origin and early audience are Filipino, but the master brand should be internationally understandable. Filipino cultural context should be an important content and storytelling advantage—not a geographic limitation in the brand name.

The existing report specifically addresses the Filipino metabolic context: rice, bread, noodles, sweetened drinks, desserts and processed foods are common parts of everyday life. It also explicitly avoids framing carbohydrates or rice as inherently bad and instead emphasizes quantity, frequency, meal composition, physical activity, sleep, body fat, genetics, age and existing conditions. ■filecite■turn1file0■L170-L187■

Website implication: retain Filipino examples, stories and culturally familiar food contexts, while writing the core brand language in clear international English so the site can expand to Asia and eventually a global audience.

7. Website Brand Expression

Recommended homepage hierarchy:

BEFORE THE NUMBERS

Don’t wait for the diagnosis.

Understand your health before a diagnosis forces you to.

Learn the signals. Understand the numbers. Know your trajectory. Make informed changes.

Primary CTA: START HERE / UNDERSTAND YOUR METABOLIC HEALTH

Secondary CTA: EXPLORE THE HIDDEN METABOLIC CLOCK

The exact homepage copy should be refined by the branding/content team. The objective is clarity, not medical overclaiming.

8. Visual Identity Direction

The visual identity should feel like an **awakening / warning system** rather than a conventional hospital, diabetes clinic or diet brand.

Element	Direction
Overall feeling	Serious, intelligent, modern, human, urgent but hopeful
Symbolism	Numbers, signals, clock/time, trajectory, early warning, turning point
Avoid	Generic medical cross, stock doctor imagery, fear-heavy disease imagery, “miracle cure” aesthetics
Photography	Real people, families, everyday food/lifestyle situations, practical health-monitoring moments
Typography	Strong, highly legible headline typography; clean body typography
Color	A restrained health-oriented base with one strong warning/accent color; final palette to be developed by designer
Logo system	Should work as favicon, social avatar, website header, PDF cover, video watermark and campaign graphic

9. Content Architecture

- START HERE — What this movement is about
- THE HIDDEN METABOLIC CLOCK — Core framework / lead magnet / educational series
- DIABETES — Basics, risk, monitoring, myths, family support
- METABOLIC HEALTH — Insulin resistance, glucose regulation, cardiometabolic health
- MONITORING & TOOLS — Glucose monitoring, blood pressure, waist, labs, practical tools
- FOOD & DAILY LIFE — Filipino and Asian food patterns, portions, meal composition, activity
- MOVEMENT & SLEEP — Practical lifestyle education
- FAMILY & COMMUNITY — Stories, awareness, caregiver/family education
- RESOURCES — FAQs, glossary, downloadable guides, references
- ABOUT — Founder story, purpose, scope and disclosures

10. Scientific / Trust Guardrails

The advocacy should be strong in its warning but disciplined in its medical language. The existing report provides the correct model: insulin resistance and metabolic dysfunction are discussed as risk-related concepts, not as a self-diagnosis; symptoms are clues rather than proof; and individualized medical care remains important.

■filecite■turn1file0■L96-L117■

Avoid absolute claims such as “this will prevent cancer,” “you can avoid dialysis,” or “normal blood sugar means your doctor is missing the disease.” The advocacy can discuss risk, prevention, early awareness and possible trajectories without promising individual outcomes.

The site's medical disclaimer should remain prominent enough to be credible but should not dominate the user experience. The report states that it is educational, not a diagnosis or substitute for individualized care, and advises qualified professional input for relevant medical circumstances. ■filecite■turn1file0■L234-L243■

11. Founder / Advocacy Voice

The founder's natural communication style is direct and warning-oriented: “I’m already here; you don't need to follow the same path.” The website should preserve that authenticity, but the organization itself should not sound angry, judgmental or fatalistic.

Recommended voice balance: **Bold warning** → “Don’t wait for the diagnosis.” **Explanation** → “Here’s what may be happening.” **Agency** → “Here’s what you can measure and discuss.” **Hope** → “Earlier understanding gives you more opportunities to act.”

12. Brand Naming Decision

Current working decision: use **Before the Numbers** as the master brand, subject to trademark clearance.

The Hidden Metabolic Clock should remain the flagship framework/title rather than the organization name. This lets the project expand beyond diabetes and even beyond metabolic health while preserving the intellectual

framework already developed.

The other candidate names are not required to be used as the master brand. They may be repurposed as future program or content names if useful.

13. Domain / Implementation Status

beforethenumbers.org has been purchased and is being connected to the Vercel deployment. The root and WWW domains were configured through Namecheap DNS using Vercel-provided records. The domain was observed as reachable while HTTPS certificate provisioning was still pending.

The branding team should treat **beforethenumbers.org** as the working canonical domain. Final HTTPS/SSL and canonical-domain behavior should be verified after DNS/SSL propagation.

The .com is already registered by another party and was not selected because of the acquisition cost. The project should not spend heavily on an aftermarket .com unless the strategic/legal case later justifies it.

14. Legal / Trademark Next Steps

1. Search BEFORE THE NUMBERS in IPOPHL for exact and confusingly similar marks.
2. Search WIPO Global Brand Database.
3. Search USPTO if U.S. expansion is part of the intended roadmap.
4. Search Singapore / relevant ASEAN databases as the Asian expansion plan develops.
5. Review similar marks by sound, appearance, meaning and relevant goods/services—not just exact spelling.
6. If no material conflict is found, obtain appropriate legal advice and consider filing the Philippine trademark before major brand investment.
7. Keep records of the domain purchase, first public use, logo development and dated brand materials.

15. One-Sentence Brand Brief

Before the Numbers is a health-awareness and education movement that helps people understand meaningful health and metabolic signals early, so they can make informed decisions before a diagnosis becomes their first wake-up call.

16. Final Direction for the Redesign Team

Design the new website as a **preventive-awareness movement**, not a disease-treatment portal. Diabetes remains a major entry point and a core content area. The larger brand promise is early understanding, informed action and long-term health agency.

The visual and verbal system should make a visitor feel: “**This is warning me early—but it is also showing me what I can do.**”

The strongest working brand lockup is:

BEFORE THE NUMBERS

Don't wait for the diagnosis.

Flagship framework: THE HIDDEN METABOLIC CLOCK

What may be happening before the numbers change.

Source basis: current project discussion plus the uploaded “The Hidden Metabolic Clock” report. The report describes metabolic-health education in a Filipino context, the conceptual progression from insulin resistance through metabolic warning signs and prediabetes toward Type 2 diabetes, and the Measure → Understand → Intervene → Monitor → Adjust framework. ■filecite■turn1file0■L11-L28■
